

the Smart Enterprise Solution

"MantaRay works like a charm... we are extremely happy. It's light years ahead of our old system."

Steve, PACS Administrator

Today's Radiology departments require a fast, reliable and easy to operate burning solution, that doesn't cost a small fortune to acquire or maintain. One of the problems with many other DICOM CD/DVD recorders is the amount of unnecessary features you pay for, but never use. Now you have a better choice with the *MantaRay CD/DVD Recording Station*.

The MantaRay offers the most essential features required by busy sites to produce universal exchange medical CDs & DVDs for referring physicians and patients alike. The MantaRay was designed with the end-user in mind, thereby creating a friendly and intuitive graphical user interface. Each application has been tested with 'non-technical' users in real world, everyday applications. The result is a simple, fast and reliable system.

Each pre-configured system includes true functionality standard with the ability to merge patient studies, a web interface for remote access users, PACS Query & Retrieve, DICOM Image Importer, Auto-Burn CD or DVD, Database Search, and many other features. But most importantly, it is simple, easy to use and reliable. Our engineers have over 100 years of combined DICOM programming experience. Current installs are located throughout the US, Australia and Canada, as we are quickly becoming the choice for professionals in leading medical institutions.
